

Certificates, with certainty.

Reinventing Certificates
in the digital age.

Zertrace

Certification has never been so simple & trustworthy.

Trust in Certificates is declining because of fraud and non-transparency. We strongly believe that this decline has to stop! Certification in many cases should guard the welfare of our trade, economic interests, our planet, and its occupants. Checking if services or goods are compliant to the claimed standard should be practical, affordable and 100% trustable.

Zertrace Certificate software empower systemic trust between operations, business, people, and products. Lengthy, costly, and complex processes are made efficient and immediate with 100% trustworthy validation via Zertrace.

Practical

Certificate code on paper, pdf, USB-stick, IoT or NFC-sticker

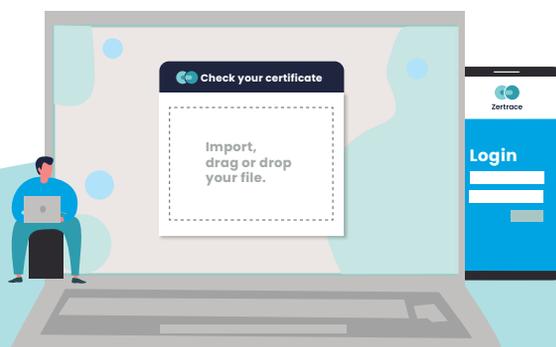

Affordable

No sign-up, non- intrusive (fits your current way of working)

Trustable

Blockchain technology based makes certificates immutable Each certification or Inspection body that uses Zertrace Certificates gives momentum to the flywheel of trust!

LEVERAGED TECHNOLOGY

Zertrace is using blockchain based technology from ENIGIO and certification software from ZERTIC-DYNASEC.

Certificates for every need.

Scoping Certificates

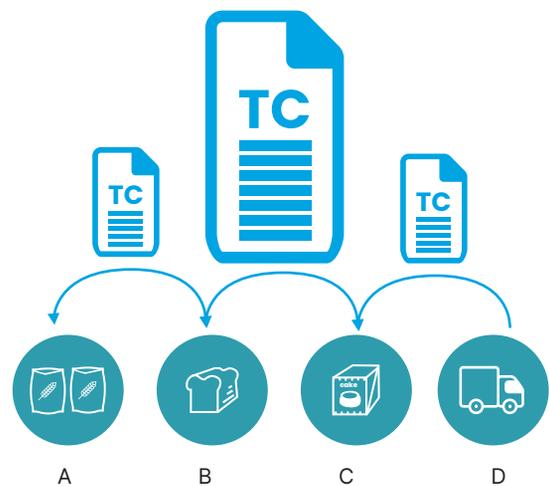

Tell about the certification of a company, product or the person.

All the certificates are part of an immutable disculpation archive.

Transaction Certificates

Tell the story of the complete certified business chain.

All the certificates are part of an immutable Chain of Custody.

OUR UNIQUE VALUE IN THE CERTIFICATES MARKET

1. Non-intrusive

Simple adoption of Zertrace service makes use of and adds to already **existing market technology-and organizational infrastructure.**

2. Secure

Only **accredited parties** can create certificates - not a multitude of members or participants.

3. Immutable certificates

100% trust instead of uncertainty to validity, if certificate has been withdrawn or even cancelled.

4. Traceable certificates

Past and current behavior of parties is easily visible.

5. Legal binding

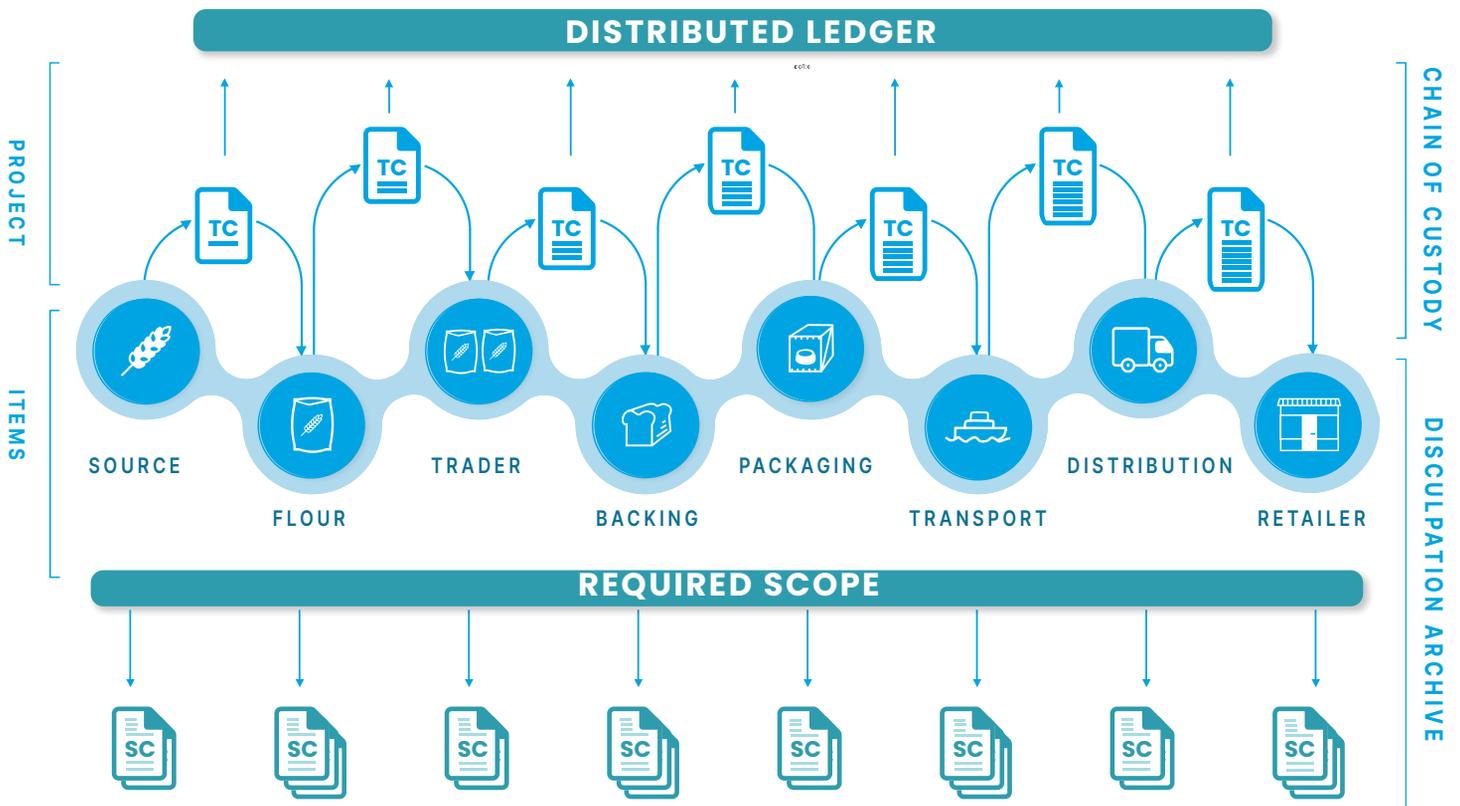

In case of possible accusations Zertrace provides you a **legal binding Disculpation Archive**, one file of all necessary documentation for Disculpation into the future.

A full Zertrace Chain of Custody example

Our scoping and transaction certificates cover the whole productive process from A to Z, see an example of how would it work for the chain of custody for a Pretzel:

Chain of Custody for a Pretzel

Our Road map

Several participants of the initiative have demands to ease the certification process. For the farmer groups we are on the verge to implement an Internal Control System (ICS) where they can prepare their internal audits. For the Transport & Logistics we saw the need to interact transaction certificates into their existing CMRs, Bills of Landing or Air Bills.

Our Market

Inspections and certifications in the European market are benefiting from Scoping Certificates as well as Transaction Certificates.

Our first outbound target is "Organic". Food products in the Agriculture and Food Industry. In the Agriculture and Food Industry we engaged in a pilot with a wide range of interacting parties:

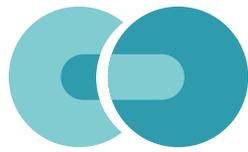

- Scheme holder
- Accreditation party
- Certification / Inspection bodies
- Farmer groups
- Transport & Logistics organization
- Supermarkets

Since the complete field of interacting parties is complicated, we looked for participation to see the impact and possible gains from several perspectives.
